

CLAIMS

What is claimed is:

1. A reusable and rechargeable glow device comprising:
 - a) a translucent container with two chambers;
 - b) whereby each chamber contains at least one chemical product which reacts with the other chemical to produce a chemiluminescent reaction;
 - c) a means in which to allow for a graduated introduction of one of the chemicals from one chamber to the other;
 - d) and further comprising a means whereby the chemicals can be removed from the container and new chemicals introduced, separately, into the two chambers to allow for further chemiluminescent reactions.
2. The device of claim 1 whereby the container is a long cylindrical shape.
3. The device of claim 1 whereby the container is in such a shape that it could be placed on or near a hazard cone or similar device.
4. The device of claim 1 whereby the container has an exterior that is colored or imprinted to increase the effectiveness of the chemiluminescent light produced or to provide entertainment or novelty.
5. The device of claim 1 whereby the container is of sufficient size to allow for an extended chemiluminescent reaction lasting many hours long.
6. The device of claim 1 whereby the chemicals are varied to change the color of the light produced by the chemiluminescent reaction.

7. A reusable and rechargeable glow device comprising:
 - a) a translucent container with two chambers;
 - b) whereby each chamber contains at least one chemical product which reacts with the other chemical to produce a chemiluminescent reaction;
 - c) a means in which to allow for a graduated introduction of one of the chemicals from one chamber to the other.
8. The device of claim 7 whereby the container is a long cylindrical shape.
9. The device of claim 7 whereby the container is in such a shape that it could be placed on or near a hazard cone or similar device.
10. The device of claim 7 whereby the container has an exterior that is colored or imprinted to increase the effectiveness of the chemiluminescent light produced or to provide entertainment or novelty.
11. The device of claim 7 whereby the container is of sufficient size to allow for an extended chemiluminescent reaction lasting many hours long.
12. The device of claim 7 whereby the chemicals are varied to change the color of the light produced by the chemiluminescent reaction.
